

LAXMAN KASHIDKAR

Full Stack Developer (Python) | GenAI & Agentic AI Systems

Pune, Maharashtra | +91 94050 22814 | kashidkar37@gmail.com | github.com/KashidkarLaxman |
linkedin.com/in/laxmankashidkar

SUMMARY

Full Stack Developer with 6+ years designing and scaling Python/FastAPI systems, distributed data pipelines, and production AI applications. Hands-on building Retrieval-Augmented Generation (RAG) pipelines with vector search (Azure AI Search) and Azure AI Foundry, plus large-scale data processing on Azure Databricks/PySpark. Practical, self-directed experience with agentic AI tooling — LangChain, LangGraph, and MCP (Model Context Protocol). Track record of measurably improving performance, cutting latency, and shipping production-grade features end-to-end.

CORE SKILLS

Languages: Python, JavaScript, SQL, Spark SQL

Full Stack Development & APIs: FastAPI, Flask, Django, REST APIs, Async Processing, OAuth 2.0, System Design, Distributed Systems, React, Vue, Firebase

GenAI & Agentic AI: LLMs, Retrieval-Augmented Generation (RAG), Vector Search (Azure AI Search), LangChain, LangGraph, MCP (Model Context Protocol), Prompt Engineering, Tool/Function Calling, LLM Fine-Tuning, Azure AI Foundry

Data & Big Data: Azure Databricks, PySpark, SQL Server, PostgreSQL, JDBC, ETL

Cloud & DevOps: Azure (AI Foundry, Databricks, AI Search), AWS (EC2), Docker, CI/CD, Git, Logging & Monitoring

Media/AI Video: Streamlit, MoviePy, Whisper (speech-to-text), Multi-Provider LLM Routing, TTS (edge-tts/gTTS)

PROFESSIONAL EXPERIENCE

Senior Software Engineer — CitiusTech, Pune **Feb 2024 – Present**

- Built and scaled full stack services for an enterprise document management platform, cutting manual documentation effort by 30%+.
- Developed FastAPI-based pipelines for Word/Excel/PDF document transformation, improving processing efficiency by 25%.
- Implemented caching and API optimizations that cut average response latency by 40%.

AI Test Case Generator — RAG System

- Built a FastAPI-based conversational test case generator backed by an Azure AI Foundry / Azure AI Search vector store, improving test case relevance and consistency by 35% and cutting test-authoring time by 40%.
- Engineered the full ingestion → embedding → retrieval pipeline and secure multipart upload workflows handling 100+ documents per session.

HEDIS Validation Pipeline — Databricks/Spark

- Built an automated, config-driven HEDIS measure validation pipeline on Azure Databricks (PySpark) with SQL Server (JDBC) integration for dynamic rule and threshold lookups.
- Packaged as a Python wheel deployed via Databricks Jobs, with Spark optimizations (AQE, shuffle partition tuning, broadcast joins) for large-scale workloads, plus structured audit reporting and schema/row-count validation.

Full Stack Developer — Zinrelo, Pune **Dec 2022 – Oct 2023**

- Led development of timezone-aware features, improving global usability across 10+ regions.
- Conducted code reviews and mentored developers, increasing team productivity and reducing defects.

Solutions Developer — Incentius, Pune **Jun 2020 – Dec 2022**

- Built full-stack B2B e-commerce applications using Flask/Django and Vue, supporting thousands of users.

- Improved system reliability and cut issue resolution time by 20% through stronger debugging practices and documentation.

PERSONAL PROJECTS

AI Video Generation Tool — Python, Streamlit, MoviePy

- Built an end-to-end pipeline that turns a topic or news-article URL into a narrated video: a custom multi-provider LLM router (Gemini, OpenAI, OpenRouter, Ollama, with automatic fallback) generates a scene-by-scene script, edge-tts/gTTS generates narration, and Whisper transcribes it for word-level synced captions.
- Designed a multi-tier visual-sourcing cascade — web image search, Pexels stock photos/video, and AI-generated imagery — with automatic fallback when a source fails or returns no results.
- Used concurrent processing (ThreadPoolExecutor) to fetch visuals and audio for multiple scenes in parallel, and MoviePy to compose the final video with transitions, karaoke-style captions, and landscape/portrait export.
- Built a Streamlit UI supporting two workflows: direct topic-to-video generation, and a two-stage news-article mode that lets the user review and edit the generated script before rendering.

EDUCATION

MCA: IICMR, Pune | 2017 – 2020

BCA: Sangameshwar College, Solapur | 2014 – 2017

CERTIFICATIONS

- Machine Learning — Coursera
- Data Analysis — Coursera
